PROFESSIONAL SUMMARY

Computer Science (AI/ML) undergraduate and AI & Software Engineering Intern at 1E Tech. Builds full-stack web apps and REST APIs with Python, FastAPI, React and PostgreSQL. Works in Agile teams with code reviews and uses AI coding agents daily.

TECHNICAL SKILLS

- **Languages & CS:** Python, Java, SQL · Data Structures & Algorithms, OOP, REST API Design
- **Web & Databases:** React, FastAPI, PostgreSQL, SQLite, Streamlit
- **AI & ML:** PyTorch, Scikit-learn, XGBoost, Hugging Face, LLMs, RAG, NLP, Speech Processing, Speaker Verification
- **Tools & Practices:** Git, GitHub, pytest, Linux, GCP, Vercel, Agile/Scrum, Code Reviews
- **AI Coding Agents:** Claude Code, OpenAI Codex, GitHub Copilot
- **Familiar With:** TypeScript, JavaScript, Tailwind CSS, Vite, WebSockets, JWT Auth, SQLAlchemy, Alembic, Qdrant, Docker

EXPERIENCE

1E Tech Pty Ltd — AI & Software Engineering Intern | Remote | Aug 2026 – Present

- Contribute to AURA, a multimodal AI voice companion for elderly and dementia care, built with Deepgram, Llama 3.3, PipeCat/WebRTC, PostgreSQL + pgvector RAG and React.
- Built voice authentication using ECAPA-TDNN speaker embeddings to verify a user's identity before granting access to sensitive conversations.
- Built a distress classification model with XGBoost that detects stress and emotional strain from voice patterns.
- Work in Agile sprints (stand-ups, planning, retrospectives) and take part in peer code reviews on pull requests.

PROJECTS

ChefStory – Real-Time Restaurant Ordering & Operations Platform | React, TypeScript, FastAPI, PostgreSQL, WebSockets, JWT | [GitHub](#)

- Built a full-stack ordering platform where diners scan a table QR code to browse the menu, place orders and track them live, with separate interfaces for kitchen, counter, floor staff and admin.
- Designed a REST API of 54 endpoints across 11 modules (orders, menu, billing, tables, analytics, expenses) on PostgreSQL, secured with JWT authentication and role-based access control.
- Built a real-time update layer using WebSocket publish/subscribe that splits each order into per-station kitchen tickets and sends status changes to customers instantly.
- Built an admin analytics dashboard (revenue, average order value, top and slow sellers, peak hours, prep time) with PDF sales reports and GST-inclusive Excel exports.

VectorDNA – Local RAG System for Python Documentation | Python, FastAPI, Qdrant, Sentence Transformers, Ollama, Streamlit | [GitHub](#)

- Built a fully offline RAG app that answers questions about Python documentation, using Sentence Transformer embeddings and top-K vector search in Qdrant.
- Designed a FastAPI /ask endpoint that builds context from retrieved chunks and queries a local LLM via Ollama for grounded, source-cited answers, shown in a Streamlit UI.

CareVoice AI – Multilingual Clinical Consultation Assistant | Python, Faster-Whisper, NLLB, BART, spaCy, FastAPI, SQLite, pytest, Docker | [GitHub](#)

- Built an end-to-end pipeline that turns multilingual doctor-patient audio into transcripts, English translations, summaries and structured clinical data using Faster-Whisper, NLLB-200, BART and spaCy.
- Benchmarked each stage on multilingual samples: WER/CER for transcription, ROUGE plus manual fact checks for summaries, and BLEU/chrF for translation.
- Exposed the workflow through FastAPI REST endpoints and a Streamlit UI, with SQLite storage, rule-based risk scoring and PDF clinical reports.
- Wrote 20 pytest unit and integration tests (database, risk assessor, reports, full pipeline) and containerized the app with Docker Compose.

EDUCATION & CERTIFICATIONS

Manipal Institute of Technology, Manipal — B.Tech in Computer Science and Engineering (AI, ML) | 2023 – July 2027 (Expected)

- **Certifications:** Google Cloud (Coursera): Generative AI, LLMs, Responsible AI · Great Learning: AI Fundamentals
