PROFESSIONAL SUMMARY

Computer Science (AI/ML) undergraduate and AI & Software Engineering Intern at 1E Tech, working on an AI voice companion. Builds full-stack web applications (REST APIs, real-time systems, React frontends) with Python, FastAPI, React and PostgreSQL. Experienced with Agile and code reviews; grounded in DSA, OOP, LLMs and RAG.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming, REST API Design
- **Web & Databases:** React, FastAPI, REST APIs, PostgreSQL, Streamlit
- **AI & ML:** PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, LLMs, RAG, NLP, Speech Processing, Ollama
- **Tools & Practices:** Git, GitHub, Linux, Google Cloud Platform (GCP), Agile/Scrum, Code Reviews
- **Familiar With:** TypeScript, JavaScript, Tailwind CSS, Vite, WebSockets, JWT Auth, SQLAlchemy, Alembic, Qdrant

EXPERIENCE

1E Tech Pty Ltd — AI & Software Engineering Intern | Remote | Aug 2026 – Present

- Contribute to AURA, a multimodal AI voice companion for elderly and dementia care, built with Deepgram, Llama 3.3, PipeCat/WebRTC, PostgreSQL + pgvector RAG and React/TypeScript.
- Drafted a technical build plan covering architecture trade-offs (real-time vs. batch distress detection, privacy vs. data retention) and a per-user baseline profiling pipeline from data inputs to storage and retrieval.
- Work in Agile sprints with daily stand-ups, sprint planning and retrospectives, and take part in peer code reviews through pull requests.

PROJECTS

ChefStory – Real-Time Restaurant Ordering & Operations Platform | React, TypeScript, FastAPI, PostgreSQL, WebSockets, JWT | [GitHub](#)

- Built a full-stack ordering platform where diners scan a table QR code to browse the menu, place orders and track them live, with separate interfaces for kitchen, counter, floor staff and admin.
- Designed a REST API of 54 endpoints across 11 modules (orders, menu, billing, tables, analytics, expenses) on PostgreSQL, secured with JWT authentication and role-based access control.
- Built a real-time update layer using WebSocket publish/subscribe that splits each order into per-station kitchen tickets and sends status changes to customers instantly.
- Built an admin analytics dashboard (revenue, average order value, top and slow sellers, peak hours, prep time) with PDF sales reports and GST-inclusive Excel exports.

VectorDNA – Local RAG System for Python Documentation | Python, FastAPI, Qdrant, Sentence Transformers, Ollama, Streamlit | [GitHub](#)

- Built a fully offline retrieval-augmented generation (RAG) app with a modular, config-driven design that answers natural-language questions about Python documentation.
- Implemented a retrieval pipeline that generates Sentence Transformer embeddings and runs top-K vector similarity search in Qdrant over documentation chunks.
- Designed a FastAPI REST service (/ask) that builds context from retrieved documents and queries a local LLM through Ollama to return grounded answers with sources, shown in a Streamlit UI.

CareVoice AI – Multilingual Medical Speech Analytics Pipeline | Python, Whisper, BART, NLLB, Hugging Face Transformers, Librosa | [GitHub](#)

- Built an end-to-end pipeline using Whisper, BART and NLLB that turns doctor–patient audio into transcriptions, translations and structured summaries.
- Designed an evaluation workflow to benchmark each stage (WER and CER for transcription, ROUGE for summarization, BLEU and chrF for translation), backed by manual factual-accuracy checks on medical terms.

EDUCATION & CERTIFICATIONS

Manipal Institute of Technology, Manipal — B.Tech in Computer Science and Engineering (AI, ML) | 2023 – July 2027 (Expected)

- **Certifications:** Google Cloud: Generative AI, Large Language Models, Responsible AI (Coursera) · Great Learning: AI Fundamentals
